

## ● The choice is yours—100% email protection, or 15%

The reality is that email appliances and managed service solutions miss over 85% of your email traffic by monitoring only inbound and outbound messages—what kind of protection is that?

If you are considering inbound and outbound email monitoring, then you know how important email content control is to managing and mitigating corporate risk and liability.

But ignoring internal email traffic and monitoring only 15% of your messages leaves you wide open to serious risks.

In virtually every recent case involving either employee litigation or corporate non-compliance, the most damaging evidence was contained in internal email. Add to this the myriad of external regulations and it's easy to see why internal email monitoring and control is becoming a cornerstone of any comprehensive compliance strategy.

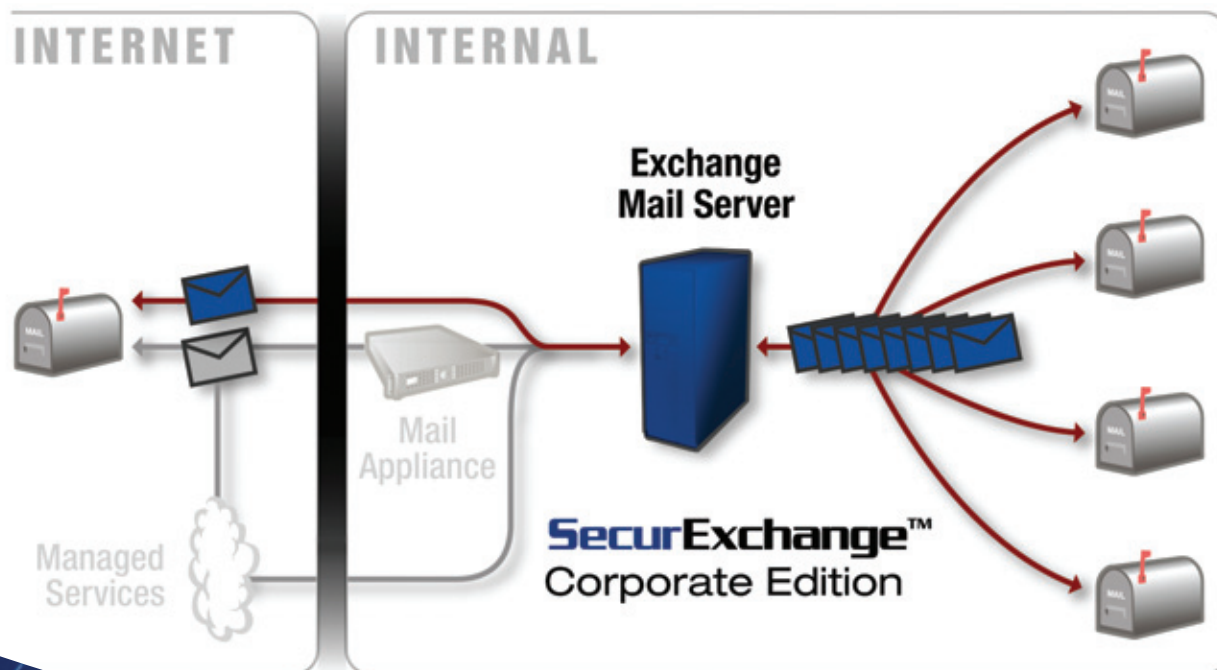

You still need protection from information leakages and inbound email threats, but as our customers have discovered, the best protection is total protection.

Nemx is the leader in active email control solutions, and SecurExchange Corporate Edition provides Microsoft Exchange users with the only integrated solution for intelligent email content and process control for every single message—so you don't have to worry, we've got your back, 100% of it!

As the diagram illustrates, SecurExchange provides active content control for all messages, including the crucially important internal email. Other solutions see only that fraction of the email that enters or leaves your network.

### Monitoring internal email is critical

- *Internal email outnumbers all other messages 8 to 1*
- *Nearly 50% of corporate email users have sent or received inappropriate content*
- *Less than half of email users always comply with corporate email policies*
- *Over 75% of all harassment and/or discrimination occurrences originate between employees*
